"Pulmonary Aspergillosis with Septicopyemia and Leukemoid Reaction."

Sofia, Ekperimentalna Meditsina i Morfologiya, Vol 2, No 3, April-May-June 1963, pp 13-18.

Abstract: [Authors' English summary modified] The severe case described developed on the basis of chronic pneumonia, chronic adhesive hyperplastic pleurisy, and bronchiectasis subsequent to treatment with antibiotics. The case evolved into mycotic septicopyemia with metastasis in the lymph nodes, spleen, and other organs. The leukemoid reaction developed with the appearance of paramyeloblasts in the peripheral blood, which vanished during the sixth and last month of the disease.

"Morphological Changes in Radioprotected, Lethally Irradiated, and Bone-Marrow Treated Animals"

Sofia, Doklady Bolgarskov Akademii Nauk, Vol 20, No 1, 1967, pp 77-80

Abstract: [English article] There are no data in literature about the effect of radioprotectors and of the transfusion of bone marrow on the morphological changes in irradiated animals. To gather data, the authors carried out experiments with 351 albino rats, irradiated with 600 r and treated (276 of them) with prophylactic agents (ACT, MEA, and 5-HT), as well as with therapeutic agents after irradiation (bone marrow, antibiotics, and vitamins). The methods employed are described elsewhere (Compt. rend. Acad. Bulg. Sci., 13, 1965, 1043; 19, 1966, 433). An analysis of the results shows, among other things, that the prophylactic and therapeutic means applied do not fully avert the injuries of irradiation though they diminish them considerably. This is particularly true of the hemopoietic and sex tissues and of the intestinal tract which are very radiosensitive. The combination of bone marrow, antibiotics, and vitamins yields the best effect.

APPROVED FOR RELEASE: 06/14/2000

CIA-RDP86-00513R000826810012-3

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 20, No 1, 1967, pp 77-80

The lymph apparatus is not protected as well, and despite regeneration, in a large part of the animals it remains hypoplastic even after the first year following irradiation. The ovaries are preserved to a large degree. The survival during acute stage of irradiation injury is in all probability due to the protective and therapeutic effect on hemopoiesis and on the intestinal tract. 2 Bulgarian references. "Ultrastructural Changes of the Liver in Experimental Lipoidosis"

Sofia, Doklady Bolgarskoy Akademii Nauk, Vol 19, No 9, 1966, pp 859-862

Abstract: [English article] The connection between nutrition and arteriosclerosis and the part played by the liver were emphasized earlier by numerous authors (see, e.g., F. A. Abdurakhmanov, Bopr. pitaniya, 1954, No 5, 50). The present paper reports on the study of fine changes taking place in liver during experimentally induced cholesterol lipoidosis. Results are presented in the form of four electron-microscopic pictures. They indicate that loading with cholesterol probably injures the cell organelles of the hepatocyte, thereby affecting on one hand the systems taking part in the synthesis of cholesterol and on the other hand those related to lipid and protein metabolisms. Other morphological changes (changes in lysosomes, mitochondria, and endoplasmic reticulum) are related not only to changes in lipid metabolism but also to a considerable degree to changes in protein metabolism. There are 1 Bulgarian, 6 Soviet, and 4 Western references. (Manuscript received, 26 May 66.)

TOPIC TAGS: biologic conference, nutriology

ABSTRACT: The Second National Conference on Nutrition, organized by the Institute of Nutrition, Bulgarian Academy of Sciences, was held on 7 and 8 October 1965. The conference opened with a report of Corr. Member of the Academy Tashev, T. on the activities of the Institute during the past five years of its existence. This was followed by the presentation of 67 papers, and the present article gives the names of the authors together with brief summaries of the papers. [JPRS: 36,599]

"Treatment of Vibrionic Dysentery in Swine with Neguvon."

Sofia, Veterinarna Sbirka, Vol 59, No 10, 1962; pp 6-7.

Abstract: Report of an outbreak of vibrionic dysentery in cooperative farms in villages Mileva and Zimnitsa: 20 to 30% of all pigs were ill with hemorrhagic diarrhea, laboratory diagnosis included accompanying ileal ascariasis and colonic trichocephalosis. Individual administration orally of Neguvon 75 milligram per kilogram /presumably single dose?/ gave excellent results, recovery even of severely ill animals; no segregation of healthy from recovered as has to be done with arsenical preparations which induce carrier state. Drug is recommended.

"Tracing of the Circulation of Polio Virus and Other Enteroviruses by an Investigation of Sewage"

Sofia, Suvremenna Meditsina, Vol 17, No 6, 1966, pp 505-510

Abstract: To evaluate the epidemiological effectiveness of immunizations with live anti-poliomyelitis vaccine carried out in Sofia, the circulation of polio virus and other enteroviruses in sewage effluents of a municipal region with a population of approximately 500,000 was investigated in Jun 64 - Jun 65. Of 116 samples collected, 75 (64.7%) contained cytopathogenic agents. Among the 99 enterovirus strains that were isolated, polio virus and Coxsackie B-3 predominated. Polio virus was isolated mainly during the winter and spring months of 1965, a period which coincided with the anti-poliomyelitis immunizations, while the occurrence of Coxsackie viruses was at a maximum in the summer and fall of 1964. Among the Coxsackie viruses were B-4, B-5, and B-6, which hitherto were encountered quite seldom in Bulgaria. The data obtained indicated that the mechanical purification of sewage, which is applied in Sofia, is not sufficiently effective. Tables and graphs, 7 references (3 USSR, 4 Western). Russian and English summaries. Manuscript received Feb 66.

Schüle diagram of  $TS$  (temperature-entropy),  $TJ$  (temperature-enthalpy), and  $TU$  (temperature-energy) for 1 cu. m. (at 0° and 760 mm. Hg) air, two atomic gases, pure fuel gases, steam, and carbon dioxide corrected up to 3000° with the aid of spectroscopic data for specific heats. Zhiyko N. Krut'ev. *Godishnik Mashinno-Elektrichesk. Nauk. S. No. 1, 255-77(1955)*(German summary 277-8).—A corrected Schüle-type diagram (*Technische Thermodynamik* 1923, Vol. II, No. 4(CA 24, 8067)) of the values  $TS$ ,  $TJ$ , and  $TU$  for various gases was presented. The values were calcd. by the standard thermodynamic equations, using the more accurate spectroscopic data of sp. heats detd. by Justi. The corrected diagram is less universal but more accurate and has a wider temp. range than the Schüle diagram. O. A. Konstantinov
